

Linux Web Hosting

Linux web hosting

Great value UK Linux hosting

Linux hosting is a great solution for home users, business users and web designers looking for cost effective and powerful hosting. Whether you are building a single page portfolio, or you are running a database driven ecommerce website, we have a Linux hosting solution for you. Our Linux web hosting packages are also come with popular one click install CMS software such as WordPress, Joomla and Drupal. Linux hosting is flexible, powerful and great value for money.

Product features

Our Linux hosting come packed full of all the features and resources you need to make your website a success. Highlights include...

eXtend web hosting control panel: eXtend is one of the world's most advanced web hosting control panels, putting you in complete control of your web hosting account. Features include, online file manager, webmail, PHPMyAdmin, free software worth over £300, website backup & restore, Google sitemap generator, FTP manager and much more.

1-click install software: Have your website up and running literally in a matter of minutes. If you are planning on using any of the popular content management systems, such as WordPress, Joomla or Drupal, you are only a click away from being up and running.

Ecommerce software: Trade securely online, and choose from a selection of leading ecommerce software to add to your website including osCommerce, CubeCart and Zencart.

Our hosting technology

Platform

We only use Dell servers in our web hosting platform. Our platform is designed to be highly redundant and all data is stored in network disk arrays.

Data is automatically synchronised between the arrays so that in the event of an array failing the remaining array continues to serve data to the servers with no downtime. Each array is also backed up each night to a separate backup cluster which is then written to tape and stored offsite.

Data centre

We utilise uninterruptable power supplies and an n+1 generator setup to ensure constant and clean energy to our infrastructure. The data centre is protected by fire suppression, monitored by CCTV both externally and internally, has 24x7x365 onsite security and the building is surrounded by an 8ft perimeter fence.

Security

We are automatically informed of new security patches via our vendor. Patches are applied within 24 hours. Our own platform is scanned each month for application vulnerabilities and we use a network scanner to identify weaknesses in our network.
